DETERGENT
REMOVABLE
DR. MARK

Marks are easily removed with detergent

- **DR. MARK IS THERE WHEN YOU NEED IT**

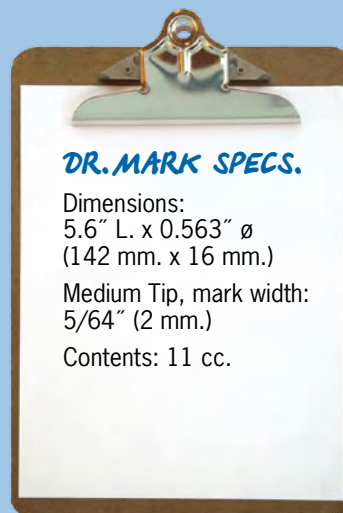

Fast drying paint formula leaves highly visible, water-resistant marks designed to show-up better than competitive products.

- **AND GONE WHEN YOU DON'T**

Marks are easily removed with alkaline detergents and cleaners with a pH of 10 or higher. No solvent or rubbing required.

- **REALLY GONE**

Dr. Mark has been tested and approved for removability by a leading manufacturer of industrial cleaners. Marks leave no "ghosting", bleed through or other adverse effects on metals' phosphate coatings, so parts can be primed or painted.

DR. MARK SPECS.
